---

Hi Wes,

This may be stale now; my apologies for not checking email last week....

**Subject:** Ammonia information

Terry and Michael,

In the wake of the explosions in Texas, NHSRC wanted to let you know that we have developed Provisional Advisory Levels (PALs) that compliment the AEGLs. PALS are recommendations for exposure levels from 24 hours up to 2 years, longer than the AEGL values of up to 8 hours. Attached is a summary document that provides exposure values in case they are needed to support the Regional response.

Tonya
